Section 2 • Indexes

Indexes for the annotated references to NASA-owned inventions covered by U.S. patents and applications for patent that were announced in *Scientific and Technical Aerospace Reports (STAR)* between May 1969 and June 1975. This issue supersedes all previous Index Sections.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, for \$5.00. For copies mailed to addresses outside the United States, add \$2.50 per copy for handling and postage.

INTRODUCTION

Several thousand inventions result each year from the aeronautical and space research supported by the National Aeronautics and Space Administration. The inventions having important use in government programs or significant commercial potential are usually patented by NASA. These inventions cover practically all fields of technology and include many that have useful and valuable commercial application.

NASA inventions best serve the interests of the United States when their benefits are available to the public. In many instances, the granting of nonexclusive or exclusive licenses for the practice of these inventions may assist in the accomplishment of this objective. This bibliography is published as a service to companies, firms, and individuals seeking new, licensable products for the commercial market.

The NASA Patent Abstracts Bibliography (NASA PAB) is a semiannual NASA publication containing comprehensive abstracts and indexes of NASA-owned inventions covered by U.S. patents and applications for patent. The citations included in NASA PAB were originally published in NASA's Scientific and Technical Aerospace Reports (STAR) and cover STAR announcements made since May 1969.

For the convenience of the user, each issue of NASA PAB has a separately bound Abstract Section (Section 1) and Index Section (Section 2). Although each Abstract Section covers only the indicated six-month period, the Index Section is cumulative covering all NASA-owned inventions announced in STAR since May 1969. Thus a complete set of NASA PAB would consist of the Abstract Section of Issue 04 (January 1974), the Abstract Section for all subsequent issues, and the Index Section for the most recent issue.

The 158 citations published in this issue of the Abstract Section cover the period January 1975 through June 1975. The Index Section contains references to the 2830 citations covering the period May 1969 through June 1975.

ABSTRACT SECTION (SECTION 1)

This PAB issue incorporates the 1975 STAR category revisions which include 10 major subdivisions divided into 74 specific categories and one general category/division. (See Table of Contents for the scope note of each category under which are grouped appropriate NASA inventions.) This new scheme was devised in lieu of the 34 category divisions which were utilized in PAB supplements (01) through (06) covering STAR abstracts from May 1969 through January 1974. Each entry in the Abstract Section consists of a STAR citation accompanied by an abstract and a key illustration taken from the patent or application for patent drawing. Entries are arranged in subject category in order of the ascending NASA Accession Number originally assigned in STAR to the invention. The range of NASA Accession Numbers within each issue is printed on the inside front cover.

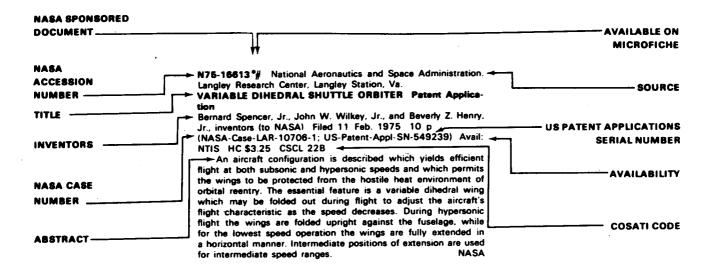

Abstract Citation Data Elements: Each of the abstract citations has several data elements useful for identification and indexing purposes, as follows:

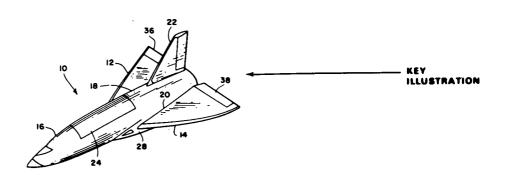

NASA Accession Number NASA Case Number Inventor's Name Title of Invention

- U.S. Patent Application Serial Number
- U.S. Patent Number (for issued patents only)
- U.S. Patent Office Classification Number(s) (for issued patents only)

These date elements appear in the citation of the abstract as depicted in the Typical Citation and Abstract reproduced below and are also used in the several indexes.

TYPICAL CITATION AND ABSTRACT FROM PATENT ABSTRACTS BIBLIOGRAPHY

INDEX SECTION (SECTION 2)

The Index Section is divided into five indexes which are cross-indexed and are useful in locating a single invention or groups of inventions.

Each of the five indexes utilizes basic data elements: (1) Subject Category Number, (2) NASA Accession Number, and (3) NASA Case Number, in addition to other specific index terms.

Subject Index: Lists all inventions according to appropriate alphabetized technical term and indicates the related NASA Case Number, the Subject Category Number, and the NASA Accession Number.

Inventor Index: Lists all inventions according to alphabetized names of inventors and indicates the related NASA Case Number, the Subject Category Number, and the NASA Accession Number.

Source Index: Lists all inventions according to alphabetized source of invention (i.e., name of contractor or government installation where invention was made) and indicates the related NASA Case Number, the Subject Category Number, and the NASA Accession Number.

Number Index: Lists inventions in order of ascending (1) NASA Case Number, (2) U.S. Patent Application Serial Number, (3) U.S. Patent Classification Number, and (4) U.S. Patent Number and indicates the related Subject Category Number and the NASA Accession Number.

Accession Number Index: Lists all inventions in order of ascending NASA Accession Number and indicates the related Subject Category Number, the NASA Case Number, the U.S. Patent Application Serial Number, the U.S. Patent Classification Number, and the U.S. Patent Number.

HOW TO USE THIS PUBLICATION TO IDENTIFY NASA INVENTIONS

To identify one or more NASA inventions within a specific technical field or subject, several techniques are possible when using the flexibility incorporated into the NASA PAB.

- (1) Using Subject Category: To identify all NASA inventions in any one of the subject categories in this issue of NASA PAB, select the desired Subject Category in the Abstract Section (Section 1) and find the inventions abstracted thereunder. For previous NASA PAB issues, the Table of Contents to Section 1 should be examined as the subject categories were changed beginning with NASA PAB (07).
- (2) Using Subject Index: To identify all NASA inventions listed under a desired technical subject index term, (A) turn to the cumulative Subject Index in the Index Section and find the invention(s) listed under the desired technical subject term. (B) Note the indicated

Accession Number and the Subject Category Number. (C) Using the indicated Accession Number, turn to the inside front cover of the Index Section to determine which issue of the Abstract Section includes the Accession Number desired. (D) To find the abstract of the particular invention in the issue of the Abstract Section selected, (i) use the Subject Category Number to locate the Subject Category and (ii) use the Accession Number to locate the desired invention within the Subject Category listing.

(3) Using Patent Classification Index: To identify all inventions covered by issued NASA patents (does not include applications for patent) within a desired Patent Office Classification, (A) turn to the Patent Classification Number in the Number Index of Section 2 and find the associated invention(s) and (B) follow the instructions outlined in (2)(B), and (D) above.

PUBLIC AVAILABILITY OF COPIES OF PATENTS AND PATENT APPLICATIONS

Copies of U.S. patents may be purchased directly from the U.S. Patent Office, Washington, D.C. 20231, for fifty cents a copy.

Copies of pending NASA applications for patent abstracted in NASA PAB are sold by the National Technical Information Service. Springfield, Virginia 22161, at the price shown in the citation. Microfiche are sold at the established unit price of \$2.25. When ordering copies of an application for patent from NTIS, the U.S. Patent Application Serial Number listed in the index or shown in the citation for each abstract should be used to identify the desired application for patent.

LICENSES FOR COMMERCIAL USE: INQUIRIES AND APPLICATIONS FOR LICENSE

NASA inventions, abstracted in NASA PAB, are available for nonexclusive or exclusive licensing in accordance with the NASA Patent Licensing Regulations. It is significant that all licenses for NASA inventions shall be by express written instruments and that no license will be granted or implied in a NASA invention except as provided in the NASA Patent Licensing Regulations.

Inquiries concerning the NASA Patent Licensing Program or the availability of licenses for the commercial use of NASA-owned inventions covered by U.S. patents or pending applications for patent should be forwarded to the NASA Patent Counsel of the NASA installation having cognizance of the specific invention, or the Assistant General Counsel for Patent Matters, Code GP, National Aeronautics and Space Administration, Washington, D.C. 20546. Inquiries should refer to the NASA Case Number, the Title of the Invention, and the U.S. Patent Number or the U.S. Application Serial Number assigned to the invention as shown in NASA PAB.

The NASA Patent Counsel having cognizance of the invention is determined by the first three letters or prefix of the NASA Case Number assigned to the invention. The addresses of NASA Patent Counsels are listed alongside the NASA Case Number prefix letters in the following table. Formal application of license must be submitted on the NASA Form, Application for NASA Patent License, which is available upon request from any NASA Patent Counsel.

AUTHORITY: The provisions of this Subpart 2 issued under 42 U.S.C. 2457, 2478(b) (3).

§ 1245.200 Scope of subpart.

This Subpart 2 prescribes the terms. conditions, and procedures for licensing inventions covered by U.S. patents and patent applications for which the Administrator of the National Aeronautics and Space Administration holds title on behalf of the United States.

8 1245.201 Definitions.

For the purpose of this subpart, the following definitions apply:

"Invention" means an invention (a) covered by a U.S. patent or patent application for which the Administrator of NASA holds title on behalf of the United States and which is designated by the Administration as appropriate for the grant of license(s) in accordance with this subpart.

(b) "To practice an invention" means to make or have made, use or have used, sell or have sold, or otherwise dispose of according to law any machine, article of manufacture or composition of matter physically embodying the invention, or to use or have used the process or method comprising the invention.

(c) "Practical application" means the nanufacture in the case of a composition of matter or product, the use in the case of a process, or the operation in the case of a machine, under such conditions as to establish that the invention is being utilized and that its benefits are reasonably accessible to the public.

(d) "Special invention" means any invention designated by the NASA Assistant General Counsel for Patent Matters to be subject to short-form licensing procedures. An invention may be design nated as a special invention when a determination is made that:

(1) Practical application has occurred and is likely to continue for the life of

the patent and for which an exclusive license is not in force, or

(2) The public interest would be served by the expeditious granting of a nonexclusive license for practice of the invention by the public.

(e) The "Administrator" means the Administrator of the National Aeronautics and Space Administration, or his

(f) "Government" means the Government of the United States of America.

(g) The "Inventions and Contributions Board" means the NASA Inventions and Contributions Board established by the Administrator of NASA within the Administration in accordance with section 305 of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2457).

§ 1245.202 Basic considerations

- (a) Much of the new technology resulting from NASA sponsored research and development in aeronautical and space activities has application in other fields. NASA has special authority and responsibility under the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2451), to provide for the widest practical dissemination and utilization of this new technology. In addition, NASA has been given unique requirements to protect the inventions resulting from NASA activities and to promulgate licensing regulations to encourage commercial use of these inventions.
- (b) NASA-owned inventions will best serve the interests of the United States when they are brought to practical application in the shortest time possible. Although NASA encourages the nonexclusive licensing of its inventions to promote competition and achieve their widest possible utilization, the com-mercial development of certain inventions calls for a substantial capital investment which private manufacturers may be unwilling to risk under a nonexclusive license. It is the policy of NASA to seek exclusive licensees when such licenses will provide the necessary incentive to the licensee to achieve early practical application of the invention.
- (c) The Administrator, in determining whether to grant an exclusive license, will evaluate all relevant information submitted by applicants and all other persons and will consider the necessity for further technical and market development of the invention. the capabilities of prospective licensees. their proposed plans to undertake the required investment and development, the impact on competitors, and the benefits of the license to the Government and to the public. Preference for exclusive license shall be given to U.S. citizens or companies who intend to manufacture or use, in the case of a process, the invention in the United States of America, its territories and possessions. Consideration may also be given to assisting small businesses and minority business enterprises, as well as economically depressed, low income and labor surplus areas.
 - (d) All licenses for inventions shall

be by express written instruments. No license shall be granted either expressly or by implication, for a NASA invention except as provided for in §§ 1245.203 and 1245.204 and in any existing or future treaty or agreement between the United States and any foreign government.

(e) Licenses for inventions covered by NASA-owned foreign patents and patent applications shall be granted in accordance with the NASA Foreign Patent Licensing Regulations (§ 1245.4).

§ 1245.203 Licenses for practical application of inventions.

- (a) General. As an incentive to encourage practical application of inventions, licenses will be granted to responsible applicants according to the circumstances and conditions set forth in this section.
- (b) Nonexclusive licenses. (1) Each invention will be made available to responsible applicants for nonexclusive, revocable licensing in accordance with § 1245.206, consistent with the provisions of any existing exclusive license.
- (2) The duration of the license shall be for a period as specified in the license.
- (3) The license shall require the licensee to achieve the practical application of the invention and to then practice the invention for the duration of the
- (4) The license may be granted for all or less than all fields of use of the invention and throughout the United States of America, its territories and possessions, Puerto Rico, and the District of Columbia, or in any lesser geographic portion thereof.
- (5) The license shall extend to the subsidiaries and affiliates of the licensee and shall be nonassignable without approval of the Administrator, NASA, except to the successor of that part of the licensee's business to which the invention pertains.
- (c) Short-form nonexclusive licenses. A nonexclusive, revocable license for a special invention, as defined in § 1245.201 (d), shall be granted upon written request, to any applicant by the Patent Counsel of the NASA installation having cognizance of the invention.

(d) Exclusive licenses. (1) A limited exclusive license may be granted on an invention available for such licensing provided that:

(i) The Administrator has determined that: (a) The invention has not been brought to practical application by a nonexclusive licensee in the fields of use or in the geographical locations covered by the application for the exclusive license, (b) practical application of the invention in the fields of use or geographical locations covered by the application for the exclusive license is not likely to be achieved expeditiously by the further funding of the invention by the Government or under a nonexclusive license requested by any applicant pursuant to these regulations, and (c) the exclusive license will provide the necessary incentive to the licensee to achieve the practical application of the invention; and

(ii) Either a notice pursuant

§ 1245.205 listing the invention as available for licensing has been published in the FEDERAL REGISTER for at least 9 months; or a patent covering the invention has been issued for at least 6 months. However, a limited exclusive license may be granted prior to the periods specified above if the Administrator determines that the public interest will best be served by the earlier grant of an ex-

clusive license.
(2) The license may be granted for all or less than all fields of use of the invention, and throughout the United States of America, its territories and possessions, Puerto Rico, and the District of Columbia, or in any lesser geographic

portion thereof.

(3) The exclusive period of the license shall be negotiated, but shall be for less than the terminal portion of the patent, and shall be related to the period necessary to provide a reasonable incentive to invest the necessary risk capital.

(4) The license shall require the licensee to practice the invention within a period specified in the license and then to achieve practical application of the

§ 1245.204 Other licenses.

(a) License to contractor. There is desired;

hereby granted to the contractor reporting an invention made in the performance of work under a contract of NASA in the manner specified in section 305(a) (1) or (2) of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2457(a) (1) or (2)), a revocable, nonexclusive, royalty-free license for the practice of such invention, together with the right to grant sublicenses of the same scope to the extent the contractor was legally obligated to do so at the time the contract was awarded. Such license and right is nontransferable except to the successor of that part of the contractor's business to which the invention pertains.

(b) Miscellaneous licenses. Subject to any outstanding licenses, nothing in this subpart 2 shall preclude the Administrator from granting other licenses for inventions, when he determines that do so would provide for an equitable distribution of rights. The following exemplify circumstances wherein such licenses may be granted:

(1) In consideration of the settlement

of an interference;
(2) In consideration of a release of a claim of infringement; or

(3) In exchange for or as part of the consideration for a license under adversely held patent(s).

- (b) Contents of an application for exclusive license. In addition to the requirements set forth in § 1245.206(b), the application for an exclusive license shall include:
- (1) Applicant's status, if any, in any one or more of the following categories:
 - (i) Small business firm;
 - (ii) Minority business enterprise:
 - (iii) Location in a surplus labor area;
- (iv) Location in a low-income urban area; and
- (v) Location in an area designed by the Government as economically depressed.
- (2) A statement indicating the time, expenditure, and other acts which the applicant considers necessary to achieve practical application of the invention, and the applicant's offer to invest that sum and to perform such acts if the license is granted;
- (3) A statement whether the applicant would be willing to accept a license for all or less than all fields of use of the invention throughout the United States of America, its territories and possessions, Puerto Rico, and the District of Columbia, or in any lesser geographic portion thereof.
- (4) A statement indicating the amount of royalty fees or other consideration, if any, the applicant would be willing to pay the Government for the exclusive license; and
- (5) Any other facts which the applicant believes to show it to be in the interests of the United States of America for the Administrator to grant an exclusive license rather than a nonexclusive li-

cense and that such an exclusive license should be granted to the applicant.

§ 1245.208 Processing applications for

- (a) Initial review. Applications for nonexclusive and exclusive licenses under §§ 1245.206 and 1245.207 will be reviewed by the Patent Counsel of the NASA installation having cognizance for the invention and the NASA Assistant General Counsel for Patent Matters, to determine the conformity and appropriateness of the application for license and the availability of the specific invention for the license requested. The Assistant General Counsel for Patent Matters will forward all applications for license conforming to §§ 1245,206(b) and 1245.207(b) to the NASA Inventions and Contributions Board when the invention is available for consideration of the requested license. Prior to forwarding applications for exclusive licenses to the Inventions and Contributions Board, notice in writing will be given to each nonexclusive licensee for the specific invention advising of the receipt of the application for the exclusive license and providing each nonexclusive licensee with a 30-day period for submitting either evidence that practical application of the invention has occurred or is about to occur or, an application for an exclusive license for the invention.
- (b) Recommendations of Inventions and Contributions Board. The Inventions and Contributions Board shall, in accordance with the basic considerations set forth in §§ 1245.202 and 1245.203, evaluate all applications for license forwarded by the Assistant General Counsel for Patent Matters. Based upon the facts presented to the Inventions and Contributions Board in the application and any other facts in its possession, the Inventions and Contributions Board shall recommend to the Administrator: (1) Whether a nonexclusive or exclusive license should be granted, (2) the identity of the licensee, and (3) any special terms or conditions of the license.

(c) Determination of Administrator and grant of nonexclusive licenses. The Administrator shall review the recommendations of the Inventions and Contributions Board and shall determine whether to grant the nonexclusive license as recommended by the Board. If the Administrator determines to grant the license, the license will be granted upon the negotiation of the appropriate terms and conditions of the Office of

General Counsel.
(d) Determina

ľ

(d) Determination of Administrator and grant of exclusive licenses—(1) Notice. If the Administrator determines that the best interest of the United States will be served by the granting of an exclusive license in accordance with the basic considerations set forth in §§ 1245.202 and 1245.203, a notice shall be published in the FEDERAL REGISTER announcing the intent to grant the exclusive license, the identification of the invention, special terms or conditions of the proposed license, and a statement that NASA will grant the exclusive license unless within 30 days of the publication of such notice the Inventions and Contributions Board receives in writing

any of the following together with supporting documentation:

- (i) A statement from any person setting forth reasons why it would not be in the best interest of the United States to grant the proposed exclusive license; or
- (ii) An application for a nonexclusive license under such invention, in accordance with § 1245.206(b), in which applicant states that he has already brought or is likely to bring the invention to practical application within a reasonable period.

The Inventions and Contributions Board shall, upon receipt of a written request within the 30 days' notice period, grant an extension of 30 days for the submission of the documents designated above.

- (2) Recommendation of Inventions and Contributions Board. Upon the expiration of the period required by subparagraph (1) of this paragraph, the Board shall review all written responses to the notice and shall then recommend to the Administrator whether to grant the exclusive license as the Board initially recommended or whether a different form of license, if any, should instead be granted.
- (3) Grant of exclusive licenses. The Administrator shall review the Board's recommendation and shall determine if the interest of the United States would best be served by the grant of an exclusive license as recommended by the Board. If the Administrator determines

to grant the exclusive license, the license will be granted upon the negotiation of the appropriate terms and conditions by the Office of General Counsel.

§ 1245.209 Royaltics and fees.

- (a) Normally, a nonexclusive license for the practical application of an invention granted to a U.S. citizen or company will not require the payment of royalties; however, NASA may require other consideration.
- (b) An exclusive license for an invention may require the payment of royalties, fees or other consideration when the licensing circumstances and the basic considerations in § 1245.202, considered together, indicate that it is in the public interest to do so.

§ 1245.210 Reports.

A license shall require the licensee to submit periodic reports of his efforts to work the invention. The reports shall contain information within his knowledge, or which he may acquire under normal business practice, pertaining to the commercial use that is being made of the invention and such other information which the Administrator may determine pertinent to the licensing program and which is specified in the license.

§ 1245.211 Revocation of licenses.

(a) Any license granted pursuant to § 1245.203 may be revoked, either in part or in its entirety, by the Administrator if in his opinion the licensee at any time shall fail to use adequate efforts to bring to or achieve practical application of the invention in accordance with the terms of the licensee at any

time shall default in making any report required by the license, or shall make any false report, or shall commit any breach of any covenant or agreement therein contained, and shall fail to remedy any such default, false report, or breach within 30 days after written notice, or if the patent is deemed unenforceable either by the Attorney General or a final decision of a U.S. court.

- (b) Any license granted pursuant to § 1245.204(a) may be revoked, either in part or in its entirety, by the Administrator if in his opinion such revocation is necessary to achieve the earliest practical application of the invention pursuant to an application for exclusive license submitted in accordance with § 1245.207, or the licensee at any time shall breach any covenant or agreement contained in the license, and shall fail to remedy any such breach within 30 days after written notice thereof.
- (c) Before revoking any license granted pursuant to this Subpart 2 for any cause, there will be furnished to the licensee a written notice of intention to revoke the license, and the licensee will be allowed 30 days after such notice in which to appeal and request a hearing before the Inventions and Contributions Board on the question of revocation. After a hearing, the Inventions and Contributions Board shall transmit to the Administrator the record of proceedings. its findings of fact, and its recommendation whether the license should be revoked either in part or in its entirety. The Administrator shall review the recommendation of the Board and determine whether to revoke the license in part or in its entirety. Revocation of a license shall include revocation of all sublicenses which have been granted.

§ 1245.212 Appeals.

Any person desiring to file an appeal pursuant to § 1245.211(c) shall address the appeal to Chairman, Inventions and Contributions Board. Any person filing an appeal shall be afforded an opportunity to be heard before the Inventions and Contributions Board, and to offer evidence in support of his appeal. The procedures to be followed in any such matter shall be determined by the Administrator. The Board shall make findings of fact and recommendations with respect to disposition of the appeal. The decision on the appeal shall be made by the Administrator, and such decision shall be final and conclusive, except on questions of law, unless determined by a court of competent jurisdiction to have been fraudulent, or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence.

§ 1245.213 Litigation.

An exclusive licensee shall be granted the right to sue at his own expense any party who infringes the rights set forth in his license and covered by the licensed patent. The licensee may join the Government, upon consent of the Attorney General, as a party complainant in such suit, but without expense to the Government and the licensee shall pay costs and any final judgment or decree that may be rendered against the Govern-

PATENT LICENSING REGULATIONS

ment in such suit. The Government shall also have an absolute right to intervene in any such suit at its own expense. The licensee shall be obligated to rromptly furnish to the Government, upon request, copies of all pleadings and other rapers filed in any such suit and of evidence adduced in proceedings relating to the licensed patent including, but not limited to, negotiations for settlement and agreements settling claims by a licensee based on the licensed patent, and all other books, documents, papers, and

records pertaining to such suit. If, as a result of any such litigation, the ratent shall be declared invalid, the licensee shall have the right to surrender his license and be relieved from any further obligation thereunder.

§ 1245.214 Address of communications

(a) Communications to the Assistant General Counsel for Patent Matters in accordance with §§ 1245.206 and 1245.207 and requests for information concerning licenses for NASA inventions should be addressed to the Assistant General Counsel for Patent Matters, Code GP, National Aeronautics and Space Administration, Washington, D.C. 20546.

(b) Communications to the Inventions and Contributions Board in accordance with §§ 1245.208, 1245.211, and 1245.212 should be addressed to Chairman, Inventions and Contributions Board, National Aeronautics and Space Administration, Washington, D.C. 20546.

Effective date. The regulations set forth in this subpart 2 are effective April 1, 1972.

JAMES C. FLETCHER, Administrator.

NASA FOREIGN PATENT LICENSING REGULATIONS

Selected NASA inventions are also available for licensing in countries other than the United States in accordance with the NASA Foreign Patent Licensing Regulation (14 C.F.R. 1245.4), a copy of which is available from any NASA Patent Counsel.

TABLE OF CONTENTS

Section 1 • Abstracts

Subject Categories (1975-)

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also Astronautics.

01 AERONAUTICS (GENERAL)

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also 34 Fluid Mechanics and Heat Transfer.

03 AIR TRANSPORTATION AND SAFETY

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also 16 Space Transportation and 85 Urban Technology and Transportation.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also 17 Spacecraft Communications, Command and Tracking and 32 Communications.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE

Includes aircraft simulation technology.

For related information see also 18 Spacecraft Design, Testing and Performance and 39 Structural Mechanics.

06 AIRCRAFT INSTRUMENTATION

Includes cockpit and cabin display devices; and flight instruments.

For related information see also 19 Spacecraft Instrumentation and 35 Instrumentation and Photography.

07 AIRCRAFT PROPULSION AND POWER

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels, and 44 Energy Production and Conversion.

08 AIRCRAFT STABILITY AND CONTROL

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR)

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also 14 Ground Support Systems and Facilities (Space).

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also Aeronautics.

12 ASTRONAUTICS (GENERAL)

For extraterrestrial exploration see 91 Lunar and Planetary Exploration.

13 ASTRODYNAMICS

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE)

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also 09 Research and Support Facilities (Air).

15 LAUNCH VEHICLES AND SPACE VEHICLES

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also 03 Air Transportation and Safety and 85 Urban Technology and Transportation.

17 SPACECRAFT COMMUNICATIONS, COMMAND AND TRACKING

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also 04 Aircraft Communications and Navigation and 32 Communications:

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see 54 Man/System Technology and Life Support. For related information see also 05 Aircraft Design, Testing and Performance and 39 Structural Mechanics.

19 SPACECRAFT INSTRUMENTATION

For related information see also 06 Aircraft Instrumentation and 35 Instrumentation and Photography.

20 SPACECRAFT PROPULSION AND POWER

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also 07 Aircraft Propulsion and Power, 28 Propellants and Fuels, and 44 Energy Production and Conversion.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL)

Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS

Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY

Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also 77 Thermodynamics and Statistical Physics.

26 METALLIC MATERIALS

Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS

Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS

Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also 07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, and 44 Energy Production and Conversion.

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also Physics.

31 ENGINEERING (GENERAL)

Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS

Includes land and global communications; communications theory; and optical communications.

For related information see also *O4 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING

Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuitry.

For related information see also 60 Computer Operations and Hardware and 76 Solid-State Physics.

34 FLUID MECHANICS AND HEAT TRANSFER

Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also 02 Aerodynamics and 77 Thermodynamics and Statistical Physics.

35 INSTRUMENTATION AND PHOTOGRAPHY

Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see 43 Earth Resources. For related information see also 06 Aircraft Instrumentation and 19 Spacecraft Instrumentation.

36 LASERS AND MASERS

Includes parametric amplifiers.

37 MECHANICAL ENGINEERING

Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY

Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS

Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see 05 Aircraft Design, Testing and Performance and 18 Spacecraft Design, Testing and Performance.

GEOSCIÈNCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

For related information see also Space Sciences.

42 GEOSCIENCES (GENERAL)

43 EARTH RESOURCES

Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see 35 Instrumentation and Photography.

44 ENERGY PRODUCTION AND CONVERSION

Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also 07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels, and 85 Urban Technology and Transportation.

45 ENVIRONMENT POLLUTION

Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS

Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see 93 Space Radiation.

47 METEOROLOGY AND CLIMATOLOGY

Includes weather forecasting and modification.

48 OCEANOGRAPHY

Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes life sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL)

Includes genetics.

52 AEROSPACE MEDICINE

Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES

 Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT

Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY

Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL)

60 COMPUTER OPERATIONS AND HARDWARE

Includes computer graphics and data processing: For components see 33 Electronics and Electrical Engineering.

61 COMPUTER PROGRAMMING AND SOFTWARE

Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS

Includes computer networks.

63 CYBERNETICS

Includes feedback and control theory.
For related information see also 54 Man/System
Technology and Life Support.

64 NUMERICAL ANALYSIS

Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY

Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS

Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS

Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.

For related information see also Engineering.

70 PHYSICS (GENERAL)

For geophysics see 46 Geophysics. For astrophysics see 90 Astrophysics. For solar physics see 92 Solar Physics.

71 ACOUSTICS

Includes sound generation, transmission, and

For noise pollution see 45 Environment Pollution.

72 ATOMIC AND MOLECULAR PHYSICS

Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY **PHYSICS**

Includes elementary and nuclear particles; and reactor theory.

For space radiation see 93 Space Radiation.

74 OPTICS

Includes light phenomena.

75 PLASMA PHYSICS

Includes magnetohydrodynamics and plasma

For ionospheric plasmas see 46 Geophysics. For space plasmas see 90 Astrophysics.

76 SOLID-STATE PHYSICS

Includes superconductivity.

For related information see also 33 Electronics and Electrical Engineering and 36 Lasers and Masers.

77 THERMODYNAMICS AND STATISTICAL PHYSICS

Includes quantum mechanics; and Bose and Fermi

For related information see also 25 Inorganic and Physical Chemistry and 34 Fluid Mechanics and Heat Transfer.

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL)

Includes educational matters.

81 ADMINISTRATION AND **MANAGEMENT**

Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE

Includes information storage and retrieval technol- GENERAL ogy; micrography; and library science.

For computer documentation see 61 Computer Programming and Software.

83 ECONOMICS AND COST ANALYSIS

Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE

Includes space law: international law: international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

For related information see 03 Air Transportation and Safety, 16 Space Transportation, and 44 Energy Production and Conversion.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

For related information see also Geosciences.

88 SPACE SCIENCES (GENERAL)

89 ASTRONOMY

Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS

Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY **EXPLORATION**

Includes planetology; and manned and unmanned flights.

For spacecraft design see 18 Spacecraft Design, Testing and Performance. For space stations see 15 Launch Vehicles and Space Vehicles.

92 SOLAR PHYSICS

Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION

Includes cosmic radiation; and inner and outer earth's radiation belts.

For biological effects of radiation see 52 Aerospace Medicine. For theory see 73 Nuclear and High-Energy Physics.

99 GENERAL

Subject Categories

(1969 - 1974)

01 Aerodynamics

Includes aerodynamics of bodies, combinations, internal flow in ducts and turbomachinery; wings, rotors, and control surfaces. For applications see: 02 Aircraft and 32 Space Vehicles. For related information see also: 12 Fluid Mechanics; and 33 Thermodynamics and Combustion.

02 Aircraft

Includes fixed-wing airplanes, helicopters, gliders, balloons, ornithopters, etc.; and specific types of complete aircraft (e.g., ground effect machines, STOL, and VTOL); flight tests; operating problems (e.g., sonic boom); safety and safety devices; economics; and stability and control. For basic research see: 01 Aerodynamics. For related information see also: 31 Space Vehicles; and 32 Structural Mechanics.

03 Auxiliary Systems

Includes fuel cells, energy conversion cells, and solar cells; auxiliary gas turbines; hydraulic, pneumatic and electrical systems; actuators; and inverters. For related information see also: 09 Electronic Equipment; 22 Nuclear Engineering; and 28 Propulsion Systems.

04 Biosciences

Includes aerospace medicine, exobiology, radiation effects on biological systems; physiological and psychological factors. For related information see also: 05 Biotechnology.

.05 Biotechnology

Includes life support systems, human engineering; protective clothing and equipment; crew training and evaluation, and piloting. For related information see also: 04 Biosciences.

06 Chemistry

Includes chemical analysis and identification (e.g., spectroscopy). For applications see: 17 Materials, Metallic; 18 Materials, Nonmetallic; and 27 Propellants.

07 Communications

Includes communications equipment and techniques; noise; radio and communications blackout; modulation telemetry; tracking radar and optical observation; and wave propagation. For basic research see: 23 Physics, General; and 21 Navigation.

08 Computers

Includes computer operation and programming: and data processing. For applications, see specific categories. For related information see also: 19 Mathematics.

09 Electronic Equipment

Includes electronic test equipment and maintainability; component parts, e.g., electron tubes, tunnel diodes, transistors, integrated circuitry; microminiaturization. For basic research see: 10 Electronics. For related information see also: 07 Communications and 21 Navigation.

10 Electronics

Includes circuit theory; and feedback and control theory. For applications see: 09 Electronic Equipment. For related information see specific Physics categories.

11 Facilities, Research and Support

Includes airports; lunar and planetary bases including associated vehicles; ground support systems; related logistics; simulators; test facilities (e.g., rocket engine test stands, shock tubes, and wind tunnels); test ranges; and tracking stations.

12 Fluid Mechanics

Includes boundary-layer flow; compressible flow; gas dynamics; hydrodynamics; and turbulence. For related information see also: 01 Aerodynamics; and 33 Thermodynamics and Combustion.

13 Geophysics

Includes aeronomy; upper and lower atmosphere studies; oceanography; cartography; and geodesy. For related information see also: 20 Meteorology; 29 Space Radiation; and 30 Space Sciences.

14 Instrumentation and Photography

Includes design, installation, and testing of instrumentation systems; gyroscopes; measuring instruments and gages; recorders, transducers; aerial photography; and telescopes and cameras.

15 Machine Elements and Processes

Includes bearings, seals, pumps, and other mechanical equipment; lubrication, friction, and wear; manufacturing processes and quality control; reliability; drafting; and materials fabrication, handling, and inspection.

16 Masers

Includes applications of masers and lasers. For basic research see: 26 Physics, Solid-State.

17 Materials, Metallic

Includes cermets; corrosion; physical and mechanical properties of materials; metallurgy; and applications as structural materials. For basic research see: 06 Chemistry. For related information see also: 18 Materials, Nonmetallic; and 32 Structural Mechanics.

18 Materials, Nonmetallic

Includes corrosion; physical and mechanical properties of materials (e.g., plastics); and elastomers, hydraulic fluids, etc. For basic research see: 06 Chemistry. For related information see also: 17 Materials, Metallic; 27 Propellants; and 32 Structural Mechanics.

19 Mathematics

Includes calculation methods and theory; and numerical analysis. For applications see specific categories. For related information see also: 08 Computers.

20 Meteorology

No Abstracts

Includes climatology; weather forecasting; and visibility studies. For related information see also: 13 Geophysics; and 30 Space Sciences.

21 Navigation

Includes guidance; autopilots; star and planet tracking; inertial platforms; and air traffic control. For related information see also: 07 Communications.

22 Nuclear Engineering

Includes nuclear reactors and nuclear heat sources used for propulsion and auxiliary power. For basic research see: 24 Physics, Atomic, Molecular, and Nuclear. For related information see also: 03 Auxiliary Systems; and 28 Propulsion Systems.

23 Physics, General

Includes acoustics, cryogenics, mechanics, and optics. For astrophysics see: 30 Space Sciences. For geophysics and related information see also: 13 Geophysics, 20 Meteorology, and 29 Space Radiation.

24 Physics, Atomic, Molecular,

and Nuclear

Includes atomic, molecular and nuclear physics. For applications see: 22 Nuclear Engineering, For related information see also: 29 Space Radiation.

25 Physics, Plasma

Includes magnetohydrodynamics. For applications see: 28 Propulsion Systems.

26 Physics, Solid-State

Includes semiconductor theory; and superconductivity. For applications see: 16 Masers. For related information see also: 10 Electronics.

27 Propellants

Includes fuels; igniters; and oxidizers. For basic re-

search see: 06 Chemistry; and 33 Thermodynamics and Combustion. For related information see also: 28 Propulsion Systems.

28 Propulsion Systems

Includes air breathing, electric, liquid, solid, and magnetohydrodynamic propulsion. For nuclear propulsion see: 22 Nuclear Engineering. For basic research see: 23 Physics, General; and 33 Thermodynamics and Combustion. For applications see: 31 Space Vehicles. For related information see also: 27 Propellants.

29 Space Radiation

Includes cosmic radiation; solar flares; solar radiation, and Van Allen radiation belts. For related information see also: 13 Geophysics, and 24 Physics, Atomic, Molecular, and Nuclear.

30 Space Sciences

Includes astronomy and astrophysics; cosmology; lunar and planetary flight and exploration; and theoretical analysis of orbits and trajectories. For related information see also: 11 Facilities, Research and Support; and 31 Space Vehicles.

31 Space Vehicles

Includes launch vehicles; manned space capsules; clustered and multistage rockets; satellites; sounding rockets and probes; and operating problems. For basic research see: 30 Space Sciences. For related information see also: 28 Propulsion Systems; and 32 Structural Mechanics.

32 Structural Mechanics

Includes structural element design and weight analysis; fatigue; thermal stress; impact phenomena; vibration; flutter; inflatable structures; and structural tests. For related information see also: 17 Materials, Metallic; and 18 Materials, Nonmetallic.

33 Thermodynamics and Combustion

Includes ablation, cooling, heating, heat transfer, thermal balance, and other thermal effects; and combustion theory. For related information see also: 12 Fluid Mechanics; and 27 Propellants.

34 General

Includes information of a broad nature related to industrial applications and technology, and to basic research; defense aspects; information retrieval; management; law and related legal matters; and legislative hearings and documents.

Section 2

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. A brief description of the document, e.g., title, title plus a title extension, or Notation of Content (NOC), is included for each subject entry to indicate the subject heading context; these descriptions are arranged under each subject heading in ascending accession number order. The NASA Case Number serves as the prime access number to the patent documents. The Subject Category Number indicates the category in Section 1 (Abstracts) in which the patent citation and abstract are located. The NASA accession number denotes the number by which the citation is identified within the subject category.

[NASA-CASE-MFS-22145-2] c25 N74-35145	COINCIDENCE CIRCUITS
COBALT ALLOYS	Pine frequency measurement by coincidence detection
High strength, corrosion resistant cobalt-based	[NASA-CASE-MSC-14649-1] c32 N75-13124
alloys for aerospace structures [NASA-CASE-XLE-00726] c17 N71-15644	COLD CATHODES
High temperature cobalt-base alloy resistant to	Cold cathode discharge tube with pressurized gas
corrosion by liquid metals and to sublimation	cell for meteoroid detection in space
in vacuum environment	[NASA-CASE-LAR-10483-1] c14 N73-32327
[NASA-CASE-XLE-02991] c17 N71-16025	COLD WORKING
High temperature ferromagnetic cobalt-base alloy	Cold metal hydroforming techniques using epoxy
for electrical power generating equipment	molds for counteracting creep or stretch
[NASA-CASE-XLE-03629] c17 N71-23248	[NASA-CASE-XLE-05641-1] c15 N71-26346
Cobalt-tungsten alloys with superior strength at	COLLAPSE
elevated temperatures	Collapsible piston for hypervelocity gun
[NASA-CASE-LEW-10436-1] c17 N73-32415	[NASA-CASE-MSC-13789-1] c11 N73-32152
COCKPIT SIMULATORS	COLLECTION
Controlled visibility device for simulating poor	Automatic liquid inventory collecting and
visibility conditions in training pilots in	dispensing unit
instrument landing and flight procedures	[NASA-CASE-LAR-11071-1] c35 N75-19611
[NASA-CASE-XFR-04147] c11 N71-10748	COLLINATION
CODERS	Long range laser traversing system
Design and development of encoder/decoder system	[NASA-CASE-GSC-11262-1] c16 N74-21091

[NASA-CASE-NPO-10271] C17 N71-16393	Counter-divider circuit for accuracy and
method and apparatus for inducing compressive	reliability in binary circuits
stresses in pressure vessel to prevent stress	[HASA-CASE-XMF-00421] C09 N70-34502
corrosion	Reversible ring counter using cascaded single
[NASA-CASE-XLA-07390] C15 N71-18616	silicon controlled rectifier stages
Development of fluoride coating to prevent	[NASA-CASE-XGS-01473] c09 N71-10673
oxidation of beryllium surfaces at elevated	Capacitor sandwich structure containing metal sheets of known thickness for counting
temperatures	penetration rates of meteoroids
[NASA-CASE-LEW-10327] c17 N71-33408	[NASA-CASE-XLE-01246] c14 H71-10797
Prevention of hydrogen embrittlement of high strength steel by additive potassium	Electronic counter circuit utilizing magnetic
hydroxide in hydrazine	core and low power consumption
[NASA-CASE-NPO-12122-1] c27 N74-20397	[NASA-CASE-XNP-08836] C09 N71-12515
CORROSION RESISTANCE	Synchronous counter design incorporating
High strength, corrosion resistant cobalt-based	cascaded binary stages driven by previous
alloys for aerospace structures	stages and inputs through NAND gates
[NASA-CASE-XLE-00726] C17 H71-15644	[NASA-CASE-NGS-02440] c08 N71-19432

PABRICS SUBJECT INDEX

Rethod and apparatus for fabricating solar cell panels	access areas [NASA-CASE-IMS-03745] c15 N71-21076
[HASA-CASE-XHP-03413] C03 H71-26726	Design and development of module joint clamping
Pabrication of root cord restrained fabric suit	device for application to solar array
sections from sheets of fabric	construction
[NASA-CASE-MSC-12398] c05 N72+20098 Method of fabricating equal length insulated wire	[NASA-CASE-XNP-02341] c15 N71-21531
[NASA-CASE-PRC-10038] c15 H72-20444	Threadless fastener apparatus comprising receiving apertures for plurality of articles,
Development of thin film temperature sensor from	self-locked condition, and capable of using
TaO .	nonmalleable materials in both ends
[NASA-CASE-BPO-11775] c26 H72-28761	[HASA-CASE-XPR-05302] c15 N7 1-23250
PABBICS Pabbication of most cond most point fabric cuit	Development of resilient fastener for attaching
Pabrication of root cord restrained fabric suit sections from sheets of fabric	skin of aerospace vehicles to permit movement of skin relative to framework
[MASA-CASE-MSC-12398] CO5 N72-20098	[NASA-CASE-XLA-01Q27] c31 N71-24035
PABRY-PEROT INTERPEROMETERS	Pneumatic mechanism for releasing hook and loop
Pabry-Perot interferometer retrodirective	fasteners between large rigid structures
reflector modulator for optical communication [NASA-CASE-XGS-04480] c16 N69-27491	[NASA-CASE-XMS-10660-1] . c15 N71-25975
[HASA-CASE-IGS-04480] C16 N69-27491 PACSIMILE COMMUNICATION	PATIGUE (MATERIALS) Servocontrol system for measuring local stresses
Restoration and improvement of demodulated	at geometric discontinuity in stressed material
facsimile video signals	[NASA-CASE-XLA-08530] c32 N71-25360
[NASA-CASE-GSC-10185-1] c07 N72-12081	PATIGUE LIPE
Spectrometer integrated with a facsimile camera [NASA-CASE-LAR-11207-1] c35 N75-19613	Patigue resistant shear pin with hollow shaft
[NASA-CASE-LAE-11207-1] c35 N75-19613 PACTORIAL DESIGN	and two plugs [NASA-CASE-XLA-09122] c15 N69-27505
Space suit with pressure-volume compensator system	Improving load capacity and fatigue life of
[NASA-CASE-XLA-05332] C05 N71-11194	rolling element systems in rockets and missiles
Equipotential space suits utilizing mechanical	[NASA-CASE-XLE-02999] c15 N71-16052
aids to minimize astronaut energy at bending	Method for reducing mass of ball bearings for
joints [NASA-CASE-LAR-10007-1]	long life operation at high speed [NASA-CASE-LEW-10856-1] c15 N72-22490
PAIL-SAPE SYSTEMS	Fatigue life of hybrid antifriction bearings at
Fail-safe multiple transformer circuit	ultrahigh speeds
configuration	[NASA-CASE-LEW-11152-1] c15 N73-32359
[NASA-CASE-NPO-11078]	PATIGUE TESTING NACHINES
[NASA-CASE-MSC-12549-1] c15 N74-27903	Cryostat for use with horizontal fatigue testing machines at low temperatures
PAILURE AWALYSIS	[NASA-CASE-XMF-10968] C14 N71-24234
Method and apparatus for detecting flaws in	Patigue testing apparatus with light shield and
elongated bodies	infrared reflector for high temperature
[NASA-CASE-MFS-19218-1] c14 N74-34860	evaluation of loaded sheet samples
PAILURE MODES Method for reducing mass of ball bearings for	[NASA-CASE-XLA-01782] c14 N71-26136 PATIGUE TESTS
long life operation at high speed	Patigue testing device applying random discrete
[NASA-CASE-LEW-10856-1] c15 N72-22490	load levels to test specimen and applicable to
Inverter ratio failure detector	aircraft structures
[NASA-CASE-NPO-13160-1] C14 N74-18090 PAIRINGS	[NASA-CASE-XLA-02131] c32 N70-42003
System for deploying and ejecting releasable	Cross linked polymer system for oil or fat
claushell fairing sections from spinning	absorption properties
sounding rockets	[NASA-CASE-NPO-11609-1] c06 N72-22114
[NASA-CASE-GSC-10590-1] c31 N73-14853	PECES
FALLING SPHERES Device for determining acceleration of gravity	Fecal waste disposal container [NASA-CASE-XMS-06761] c05 N69-23192
by interferometric measurement of travel of	FEED SYSTEMS
falling body	Nonconductive tube as feed system for plasma
[NASA-CASE-XMF-05844] c14 N71-17587	thrustor
FAR INFRARED RADIATION Collimator for analyzing spatial location of	[NASA-CASE-XLE-02902] c25 N71-21694
near and distant sources of radiation	Method and apparatus for pressurizing propellant tanks used in propulsion motor feed system
[NASA-CASE-MFS-20546-2] c14 N73-30389	[NASA-CASE-XNP-00650] c27 N71-28929
PAR ULTRAVIOLET RADIATION	Pressurized tank for feeding liquid waste into
Transient heat transfer gage for measuring total	processing equipment
radiant intensity from far ultraviolet and ionized high temperature gases	[NASA-CASE-LAR-10365-1] c05 N72-27102 Pressurized inert gas feed for lighting system
[NASA-CASE-XNP-09802] c33 N71-15641	[NASA-CASE-KSC-10644] c09 N72-27227
PASTENERS	Dual frequency feed systems for Cassegrainian
Porce measuring instrument for structural	antennas
members, particularly fastening bolts or studs	[NASA-CASE-NPO-13091-1] CO9 N73-12214
[NASA-CASE-XMF-00456] c14 N70-34705 Lightweight life preserver without fastening	Improved injector with porous plug for bubbles of gas into feed lines of electrically
devices	conductive liquid
[NASA-CASE-XMS-00864] c05 N70-36493	[NASA-CASE-NPO-11377] c15 N73-27406
Nut and bolt fastener permitting all-directional	PREDBACK
movement of skin sections with respect to	RC networks with voltage amplifier, RC input
supporting structure [NASA-CASE-XLA-01807] c15 N71-10799	circuit, and positive feedback [NASA-CASE-ARC-10020] c10 N72-17172
Releasable, pin-type fastener, easily operated	Bultistage feedback shift register with states
during EVA	decomposable into cycles of equal length
[NASA-CASE-ARC-10140-1] c15 N71-17653	[NASA-CASE-NPO-11082] c08 N72-22167
Ultrasonic wrench for applying vibratory energy	Inverter oscillator with voltage feedback
to mechanical fasteners [NASA-CASE-MPS-20586] c15 N71-17686	[NASA-CASE-NPO-10760] c09 N72-25254 Fiber distributed feedback laser
Design and development of electric connectors	[NASA-CASE-NPO-13531-1] c36 N75-13243
for rigid and semirigid coaxial cables	PEEDBACK AMPLIFIERS
[NASA-CASE-XNP-04732] c09 N71-20851	Development of system with electrical properties
Design, development, and characteristics of latching mechanism for operation in limited	which vary with changes in temperature for use
recourted mecuantum for obergeton in ilutted	with feedback loop in operational amplifier

circuit	for electrical power generating equipment
[NASA-CASE-MSC-13276-1] c14 N71-27058	[NASA-CASE-XLE-03629] c17 N71-23246
Phase locked demodulator with bandwidth	PIBER OPTICS Fiber optic transducers for monitoring and
switching amplifier circuit [NASA-CASE-XNP-01107] c10 N71-28859	analysis of vibration in aerospace vehicles
Monostable multivibrator for producing output	and onboard equipment
pulse widths with positive feedback NOR gates	[NASA-CASE-XMP-02433] c14 N71-10616
[NASA-CASE-MSC-13492-1] c10 N71-28860	PIBERS
PREDBACK CIRCUITS Low power drain transistor feedback circuit	Process for fiberizing ceramic materials with high fusion temperatures and tensile strength
[NASA-CASE-XGS-04999] c09 N69-24317	[NASA-CASE-XNP-00597] c18 N71-23088
Linear three-tap feedback shift register	Piber separating and cleaning method and apparatu
[NASA-CASE-NPO-10351] c08 H71-12503	[NASA-CASE-LAR-11224-1] c15 N74-20072
Frequency control network for current feedback	PIELD EFFECT TRANSISTORS
oscillators converting dc voltage to ac or higher dc voltages	Prequency to analog converters with unipolar field effect transistor for determining
[NASA-CASE-GSC-10041-1] c10 N71-19418	potential charge by pulse duration of input
Feedback integrating circuit with grounded	signal
capacitor for signal processing	[NASA-CASE-XNP-07040] C08 N71-12500
[NASA-CASE-XAC-10607] c10 N71-23669 Development of idler feedback system to reduce	Voltage controlled, variable frequency relaxation oscillator with MOSFET variable
electronic noise problem in two parametric	current feed
amplifiers	[NASA-CASE-GSC-10022-1] c10 N71-25882
[NASA-CASE-LAR-10253-1] c09 N72-25258	Circuitry for high input impedance video
Linear shift register with feedback logic for	processor with high noise immunity [NASA-CASE-NPO-10199] c09 N72-17156
generating pseudonoise linear recurring binary sequences	[NASA-CASE-NPO-10199] c09 N72-17156 Development and characteristics of data
[NASA-CASE-NPO-11406] c08 N73-12175	multiplexer circuit using field effect
FREDBACK CONTROL	transistors arranged in tree switching
Describing continuous analog to digital	configuration [NASA-CASE-NPO-11333]
converter with parallel digital output and nonlinear feedback	Single integrated circuit chip with field effect
[NASA-CASE-XAC-04031] C08 H71-18594	transistor
Pulsed magnetic core memory element with	[NASA-CASE-GSC-10835-1] c09 N72-33205

HAGEETIC DIPOLES SUBJECT INDEX

Pulsed magnetic core memory element with	broadband traveling wave masers
blocking oscillator feedback for interrogation	[HASA-CASE-XGS-10518] c16 N71-28554
without loss of digital information	Hagnetic method for detection of aircraft position relative to runway
[MASA-CASE-IGS-03303] c08 B71-18595 Describing magnetic core current switching	[HASA-CASE-ARC-10179-1] c21 H72-22619
device for steering bipolar current pulses to	Radial magnetic field for ion thruster
memory units	[NASA-CASE-LEW-10770-1] c28 H72-22770
[NASA-CASE-NPO-10201]	Automatic shunting of ion thrustor magnetic
Reliable magnetic core circuit apparatus with application in selection matrices for digital	field when thrustor is not operating [MASA-CASE-LEW-10835-1]
memories	Apparatus for determining distance to lighting
[HASA-CASE-XHP-01318] c10 H71-23033	strokes from single station by magnetic and
Magnetic current regulator for saturable core	electric field sensing antennas
transformer [NASA-CASE-ERC-10075] c09 N71-24800	[MASA-CASE-KSC-10698] c07 H73-20175 Superconducting magnetic field trapping device
Power switch with transfluxor type magnetic core	for producing magnetic field in air
[NASA-CASE-NPO-10242] c09 N71-24803	[NASA-CASE-INP-01185] c26 H73-28710
Unsaturating magnetic core transformer design	Riectron beam controller using magnetic
<pre>with warning signal for electrical power processing equipment</pre>	field to refocus spent electron beam in microwave oscillator tube
[NASA-CASE-ERC-10125] C09 N71-24893	[MASA-CASE-LEW-11617-1] c09 H74-10195
Temperature sensitive magnetometer with	Magnetometer using a superconducting rotating hody
pulsating thermally cycled magnetic core [NASA-CASE-XAC-03740] c14 N71-26135	[NASA-CASE-NPO-13388-1]
Digital magnetic core memory with sensing	Excitation and detection circuitry for flux
amplifier circuits	responsive magnetic head
[NASA-CASE-XNP-01012] c08 N71-28925	[HASA-CASE-XHP-04183] c09 #69-24329
Saturable magnetic core and signal detection for indicating impending saturation	Cryogenic flux-gated magnetometer using superconductors
[NASA-CASE-ERC-10089] C23 N72-17747	[BASA-CASE-XAC-02407] c14 H69-27423
Commutator for steering precisely controlled	Plux gate magnetometer with toroidal gating coil
bidirectional currents through numerous loads	and solenoidal output coil for signal
by use of magnetic core shift registers [NASA-CASE-NPO-10743] c08 N72-21199	modulation or amplification [NASA-CASE-XGS-01881] c09 N70-40123
[NASA-CASE-NPO-10743] C08 N72-21199 Banded transformer cores	Development of hybrid bearing lubrication system
[NASA-CASE-NPO-11966-1] c09 N74-17928	with combination of standard type lubrication
Improved structure and method of producing	and magnetic flux field for earth atmosphere
composite of gapped and ungapped cores [NASA-CASE-NPO-13413-1] c09 N74-33738	and space environment operation [NASA-CASE-XNP-01641] c15 N71-22997
AGENTIC DIPOLES	Magnetic current regulator for saturable core
Torquemeter for determining magnitude of torque	transformer
generated by interaction of magnetic dipole	[NASA-CASE-ERC-10075] c09 N71-24800
between test specimen and ambient magnetic field [NASA-CASE-XGS-01013] c14 N71-23725	Magnetic flux pump for changing intensity of magnetic fields
AGENTIC DISKS	[NASA-CASE-XNP-01187] c15 N73-28516
Device for removing plastic dust cover from	Method for increasing intensity of magnetic
digital computer disk packs for inspection and	field by transferring flux
cleaning [NASA-CASE-LAR-10590-1] c15 N70-26819	[NASA-CASE-XNP-01188] c15 N73-32361 Magnetic bearing for supplying magnetic fluxes
AGERTIC EFFECTS	[NASA-CASE-GSC-11079-1] c37 N75-18574
Axially and radially controllable magnetic bearing	MAGNETIC PORMING
[NASA-CASE-GSC-11551-1] c15 N74-18132	Portable magnetomotive hammer for metal working
Magnetically diffused radial electric arc heater	[NASA-CASE-XMF-03793] c15 N71-24833 Method and apparatus for portable high precision
[NASA-CASE-XLA-00330] c33 N70-34540	magnetomotive bulging, constricting, and
Method and apparatus for communicating through	joining of large diameter metal tubes
ionized layer of gases surrounding spacecraft during reentry into planetary atmospheres	[NASA-CASE-IMF-05114-3] c15 N71-24865 MAGNETIC INDUCTION
[NASA-CASE-XLA-01127] CO7 N70-41372	Continuous operation, single phased, induction
Venting device for liquid propellant storage	plasma accelerator producing supersonic speeds
tank using magnetic field to separate liquid	[NASA-CASE-XLA-01354] c25 N70-36946
and gaseous phases [NASA-CASE-XLE-01449] c15 N70-41646	Automatic power supply circuit design for driving inductive loads and minimizing power
Ion engine with magnetic circuit for optimal	consumption including solenoid example
discharge	[NASA-CASE-NPO-10716] c09 N71-24892
[NASA-CASE-XLE-01124] c28 N71-14043	Double-induction variable speed system for
Development of wide range linear fluxgate magnetometer	constant-frequency electrical power generation [NASA-CASE-BRC-10065] c09 N71-27364
[NASA-CASE-XGS-01587] c14 N71-15962	Microwave generator using Gunn effect for
Magnetic element position sensing device, using	magnetic tuning
misaligned electromagnets [NASA-CASE-XGS-07514] c23 N71-16099	[NASA-CASE-NPO-12106] c09 N73-15235 High speed shutter electrically actuated
Development of non-magnetic indexing device for	
	ribbon loop for shuttering optical or fluid
orienting magnetic flux sensing instrument in	ribbon loop for shuttering optical or fluid passageways
magnetic field without generation of	passageways [NASA-CASE-ARC-10516-1] c23 N74-21300
magnetic field without generation of detrimental magnetic fields	passageways [NASA-CASE-ARC-10516-1] c23 N74-21300 Brushless dc motor with wound rotor

PROTOGRAPHIC MEASUREMENT SUBJECT. INDEX

Photographic film restoration system using	PHOTOHULTIPLIER TUBES
Fourier transformation lenses and spatial filter [FASA-CASE-MSC-12448-1] c14 F72-20394	Photomultiplier detector of Canopus for spacecraft attitude control
mechanical exposure interlock device for	[HASA-CASE-XHP-03914] c21 H71-10771
preventing film overexposure in oscilloscope camera	Electronic divider and multiplier for analog electric signals
[HASA-CASE-LAR-10319-1] C14 H73-32322	[NASA-CASE-IPE-05637] C09 H71-19480
PHOTOGRAPHIC HEASUREMENT	Circuit design for determining amount of
Photographic method for measuring viscoelastic strain in solid propellants and other materials	photomultiplier tube light detection utilizing variable current source and dark current
[HASA-CASE-XHP-0 1153] C32 B71-17645	signals of opposite polarity
Impact measuring technique for determining size	[HASA-CASE-XHS-03478] c14 H71-21040
of hypervelocity projectiles [NASA-CASE-LAR-10913] c14 B72-16282	Apparatus for detecting particle emission lower than noise level of multiplier tube
PHOTOGRAPHIC PROCESSING	[NASA-CASE-XLA-07813] c14 H72-17328
An optical process for producing classification	Scan oscilloscope for mapping surface
maps from multispectral data [NASA-CASE-MSC-14472-1] c13 H74-32780	sensitivity of photomultiplier tube
PHOTOGRAPHIC PROCESSING EQUIPMENT	[WASA-CASE-LAR-10320-1] c09 H72-23172 Design and development of light sensing device
Drying chamber for photographic sheet material	for controlling orientation of object relative
[HASA-CASE-GSC-11074-1] c14 B73-28489 PROTOGRAPHIC RECORDING	to sun or other light source.
Photographing surface flow patterns on wind	[MASA-CASE-MPO-11201] c14 M72-27409 Photomultiplier circuit including means for
tunnel test models	rapidly reducing the sensitivity thereof
[MASA-CASE-XLA-01353] c14 H70-41366 Development of focused image holography with	and protection from radiation damage [NASA-CASE-ARC-10593-1] c09 H74-27682
extended sources	[NASA-CASE-ARC-10593-1] c09 B74-27682 PROTOSEBSITIVITY
[NASA-CASE-EEC-10019] c16 H71-15551	Photosensitive light source device for detecting
Recording and reconstructing focused image holograms	unmanned spacecraft deviation from reference
[NASA-CASE-ERC-10017] c16 H71-15567	attitude [NASA-CASE-XMP-00438] c21 N70-35089
Method and means for recording and	Light sensitive control system for automatically
reconstructing holograms without use of	opening and closing dome of solar optical
reference beam [NASA-CASE-ERC-10020] c16 N71-26154	telescope [MASA-CASE-MSC-10966] c14 M71-19568
Multiple image storing system for obtaining	Scan oscilloscope for mapping surface
holographic record on film of high speed	sensitivity of photomultiplier tube
projectile [NASA-CASE-MPS-20596] c14 M72-17324	[NASA-CASE-LAR-10320-1] c09 N72-23172
Phototropic composition of matter with	Apparatus for calibrating an image dissector tube [NASA-CASE-MPS-22208-1] c14 N74-18100
sensitivity to ultraviolet light and usable	Holography utilizing surface plasmon resonances
for producing positive photographic images	[NASA-CASE-MFS-22040-1] c14 N74-26946
[NASA-CASE-XGS-03736] c14 N72-22443 Method for determining thermo-physical	PHOTOTRANSISTORS Phototransistor imaging system with mosaic of
properties of specimens photographic	phototransistors on semiconductor substrate
recording of changes in thin film phase-change	[NASA-CASE-MFS-20809] c23 N73-13660
temperature indicating material in wind tunnel [NASA-CASE-LAR-11053-1] c33 N74-18551	Phototransistor with base collector junction diode for integration into photo sensor arrays
PHOTOLONIZ ATION	[NASA-CASE-MPS-20407] c09 N73-19235
Multichannel photoionization chamber for measuring absorption, photoionization yield,	PHOTOTROPISM
and coefficients of gases	Phototropic composition of matter with sensitivity to ultraviolet light and usable
[NASA-CASE-ERC-10044-1] c14 N71-27090	for producing positive photographic images
PHOTOMETERS Michelson interferometer with photodetector for	[NASA-CASE-XGS-03736] c14 H72-22443
optical direction sensing	PHOTOVISCOBLASTICITY Photographic method for measuring viscoelastic
[NASA-CASE-NPO-10320] c14 N71-17655	strain in solid propellants and other materials
Indicator device for monitoring charge of wet	[NASA-CASE-XNP-01153] c32 N71-17645
cell battery, using semiconductor light emitter and photodetector	PHOTOVOLTAIC CELLS Sensor consisting of photocells mounted on
[NASA-CASE-NPO-10194] c03 N71+20407	pyramidical base for improved pointing
Electro-optical detector for determining	accuracy of planetary trackers
position of light source [NASA-CASE-XNP-01059] c23 N71-21821	[NASA-CASE-XNP-04180] c07 N69-39736 Light sensitive digital aspect sensor for
Photometric flow meter with comparator reference	attitude control of earth satellites or space
means	probes
[NASA-CASE-XGS-01331] c14 N71-22996 Development of radiant energy sensor to detect	[NASA-CASE-XGS-00359] c14 H70-34158 Method of producing output voltage from
the radiant energy wavelength bands from	photovoltaic cell using poly-N-vinyl carbazole
portions of radiating body	complexed with iodine
[NASA-CASE-ERC-10174] c14 N72-25409 Characteristics of infrared photodetectors	[NASA-CASE-NPO-10373] c03 N71-18698
manufactured from semiconductor material	Use of thin film light detector [NASA-CASE-NPO-11432-2] c14 N74-15090
irradiated by electron beam	PHOTOVOLTAIC EPPECT
[NASA-CASE-LAR-10728-1] c14 N73-12445 Chromato-fluorographic drug detector device	Semiconductor in resonant cavity for improving
for detecting and recording fluorescent	signal to noise ratio of communication receiver [NASA-CASE-MSC-12259-1] c07 B70-12616
properties of materials	Use of thin film light detector
[NASA-CASE-ARC-10633-1] C14 N74-26947 PHOTOMICROGRAPHY	[NASA-CASE-NPO-11432-2] c14 N74-15090
Stereo photomicrography system with stereo	PHYSICAL PROPERTIES Chemical and physical properties of synthetic
microscope for viewing specimen at various	polyurethane polymer prepared by reacting
magnifications	hydroxy carbonate with organic diisocyanate
[NASA-CASE-LAR-10176-1] c14 N72-20380 Device for displaying and recording angled views	[NASA-CASE-MPS-10512] c06 M73-30099 Ultraviolet and thermally stable polymer
of samples to be viewed by microscope	compositions poly/(diarylsiloxy)/arylazines
[NASA-CASE-GSC-11690-1] c14 N73-28499	[NASA-CASE-ARC-10592-2] c06 N74-11926
Hand-held, lightweight, portable photomicroscope [NASA-CASE-ARC-10468-1] c14 N73-33361	Polyimides of ether-linked aryl tetracarboxylic

RESPIRATORY RATE Plowmeters for sensing low fluid flow rate and	REVERSED PLOW
pressure for application to respiration rate	Multistage multiple reentry axial flow reaction
studies	turbine with reverse flow reentry ducting
[NASA-CASE-FRC-10022] c12 N71-26546	[NASA-CASE-XLE-00170] c15 N70-36412
Respiratory analysis system to determine gas	Reversible current directing circuitry for reversible motor control
flow rate and frequency of respiration and	[NASA-CASE-XLA-09371] c10 N71-18724
expiration cycles in real time [NASA-CASE-MSC-13436-1] c05 N73-32015	Positive locking check valve for stopping
Metabolic analyzer for measuring metabolic	reversed flow
rate and breathing dynamics of human beings	[NASA-CASE-XMS-09310] C15 N71-22706
[NASA-CASE-MFS-21415-1] c05 N74-20728	RETHOLDS NUMBER
RESPIROMETERS	Wind tunnel test section for simulating high Reynolds number over transonic speed range
Metabolic analyzer for measuring metabolic	[NASA-CASE-MFS-20509] c11 N72-17183
rate and breathing dynamics of human beings [NASA-CASE-MFS-21415-1] c05 N74-20728	REYNOLDS STRESS
RESPONSES	System for measuring Reynolds stress in a
System for monitoring condition responsive	turbulently flowing fluid signal processing
devices by using frequency division multiplex	[NASA-CASE-ARC-10755-2] c34 N75-16770
technique	RIBBONS Metal ribbon wrapped outer wall for
[NASA-CASE-KSC-10521] c07 N73-20176	regeneratively cooled combustion chamber
